

PERMA-GREEN'S TURF CARE PROGRAM

LATE WINTER / EARLY SPRING

Slow release fertilizer to strengthen cell development of the plant, designed not to cause excessive spring growth. Pre-Emergent crabgrass and Broadleaf weed control when weather is permitting.

Pre-Emergent crabgrass control, fertilizer, and broadleaf weed control applied to aid development of turf and reduce crabgrass populations

LATE SPRING / EARLY SUMMER

SUMMER

Low nitrogen rates with slow release non-burning fertilizer, and targeted broadleaf weed control.

Preventative grub application usually in conjunction with the summer visit.

GRUB CONTROL

LATE SUMMER / EARLY FALL

Slow release fertilizer to promote vigor and root development. Broadleaf weed control

Heavy rate of fertilizer to help develop an extensive root system and broadleaf weed control

LATE FALL / EARLY WINTER

WINTERIZER

Winterizer fertilizer will be applied to help promote a more disease resistant turf and a quick green up for next spring.
